Mobile Enterprise & Productivity Solutions

Spring 2005

NOKIA

Tools To Power The Mobile Workforce

As life goes mobile, our work goes mobile. As we blend work and personal life roles and time shift to reach all our goals, mobile technology increasingly helps us get everything done. As employees, as managers, as busy people, we want mobile solutions to help make our hectic lives more efficient and take advantage of information wherever we are. Nokia is at the forefront of helping you realize the power of a truly mobile workforce.

This catalog represents a host of solutions from top Forum Nokia developers that provide added functionality for both enterprise customers and business users who have Nokia Business Devices. Nokia offers the leading mobile end-to-end development platform and continues to work with industry leaders on standards-compliant systems to ensure full connectivity for enterprise solutions and productivity applications. The company has devices based on the Series 40 Developer Platform, Series 60 Developer Platform, and Series 80 Developer Platform that are tailored to business needs.

For more information on Nokia solutions for business, please visit **www.nokia.com/business.**

Forum Nokia PRO, our premier developer support program, provides a premium level of technical resources and business development support, including:

- Exclusive access to Nokia Developer Platform roadmaps.
- Early access to devices and SDKs.
- Preferential access to technical, training, and support services.
- Business development, co-marketing, and media relations support.
- A streamlined application sales channel for direct and profitable access to operators and other leading channels worldwide.

For more information about Forum Nokia PRO, please visit **www.forum.nokia.com/pro.**

The Mobile Enterprise & Productivity Solutions Catalog is distributed widely within Nokia's Enterprise Solutions group and is actively used by Nokia sales teams. In addition, the catalog is used in media relations activities, while Forum Nokia business developer managers are distributing it directly to Nokia's CMO operator interface.

Operators, aggregators, and anyone else involved in sourcing the world's best mobile applications should go to **www.nokia.com/developers** for more information.

Enterprise Catalog Solution Categories

The Forum Nokia Mobile Enterprise & Productivity Solutions Catalog includes products that meet the demand of organizations for robust solutions and the needs of users who want to work on their own terms. Mobile professionals, sales and field force personnel, IT organizations, and key enterprise decision makers will benefit from the opportunities afforded by mobile technology to enhance business and improve life.

Personal Productivity

An application and/or content that lets users find practical solutions to real-world problems.

- *Travel expense reporting and log*
- *Sales log*
- *World traveler help*
- *Maps*
- *Dictionaries*

Business Collaboration

An application or solution that gives mobile workers real-time access to information and co-workers.

- *Instant messaging (chat, content sharing, whiteboard)*
- *Collaboration solutions*

Mobile Security

An application or solution that protects critical information when users are working from their mobile phones; protects information during transition and storage as well as against external intruders.

- *Authentication*
- *VPN*
- *File encryption*
- *Personal firewalls*
- *Antivirus*

Device Lifecycle Management

A solution that enables cost-efficient life-cycle management of mobile business devices in enterprise environments.

- *Client provisioning*
- *Configuration management*
- *Inventory*
- *SW management for business devices*
- *Asset management functions*

Business E-mail And Personal Information Manager (PIM)

An application or solution that enables mobile access to e-mail and PIM.

- *E-mail*
- *PIM*
- *Office Applications*

Business Process Mobilizers

A solution that lets mobile workers access business process-specific information and systems.

- *Customer relationship management (CRM)*
- *Enterprise resource planning (ERP)*
- *Supply chain management (SCM)*

Nokia Developer Platforms

Nokia's Developer Platform approach enables scalability of enterprise solutions throughout Nokia business devices. Enterprise customers and business users want devices that are both stylish and functional. Nokia satisfies both demands with device platforms that can be implemented on a variety of factors and support the latest mobile technologies, thereby enabling mobilization of enterprises and business users.

For the latest list of Nokia devices, visit www.forum.nokia.com/devices.

Series 40 Developer Platform

www.forum.nokia.com/series40

The Series 40 Developer Platform features support for powerful, standards-based technologies in a slim, user-friendly design. Built with mass-market consumers in mind, the diversity of the Series 40 device portfolio makes the platform ideal for the enterprise, operators, and content aggregators who want to offer users business-class solutions in a compact package. Series 40 Developer Platform 2.0 augments the platform's capability for delivering robust, media-rich applications by offering expanded support for Java™, browsing, and Multimedia Messaging Service (MMS) while adding support for Open Mobile Alliance (OMA) Digital Rights Management (DRM) and OMA Client Provisioning.

Series 60 Developer Platform

www.forum.nokia.com/series60

The Series 60 Developer Platform, the world's leading smartphone platform, brings open standards and multivendor support to the smartphone market. More than 100 global operators offer Series 60 devices. Series 60 Developer Platform 2.0 extends the previous release by providing Symbian OS v7.0s native APIs; Connected Limited Device Configuration (CLDC) 1.0, Mobile Information Device Profile (MIDP) 2.0, and Java APIs for Bluetooth (JSR-82), Wireless Messaging API (JSR-120), and Mobile Media API (JSR-135); XHTML browsing over TCP/IP; MMS messaging with Synchronized Multimedia Integration Language (SMIL); and OMA DRM (OMA forward-lock) and OMA Client Provisioning.

Series 80 Developer Platform

www.forum.nokia.com/series80

The Series 80 Developer Platform is an ideal choice for delivering secure, powerful, and manageable applications. The Series 80 Developer Platform provides Symbian OS v7.0s native APIs; Java Personal Profile as well as CLDC 1.0, MIDP 2.0, and Java APIs for Bluetooth (JSR-82), Wireless Messaging API (JSR-120), and Mobile Media API (JSR-135); XHTML browsing over TCP/IP; MMS messaging with SMIL; and OMA DRM (OMA forward-lock) and OMA Client Provisioning.

Business Collaboration

Agile Messenger Enterprise

Agile Mobile

Agile Messenger Enterprise facilitates secure and seamless connectivity between corporate IM networks using OMA IMPS (Wireless Village), Microsoft Live Communications Server, or XMPP. Agile Messenger Enterprise also provides access to the public IM networks of Yahoo!, AOL, MSN, ICQ, QQ, and Jabber. Features include instant messaging, presence management, group conferencing, picture messaging, and Push-to-talk.

Business need: Mobile users can manage their presence and communicate securely within a company's private network
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Language localization: English, simplified Chinese, traditional Chinese; other languages upon request

Contact: smichaels@agilemobile.com

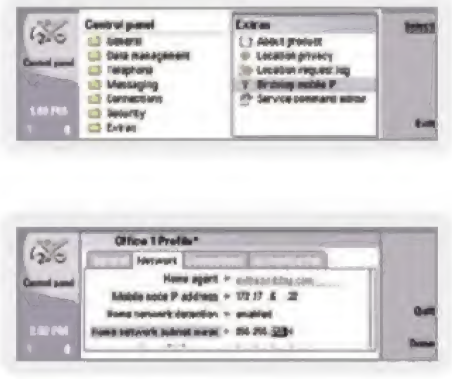

BEDD

BEDD

BEDD is a phone-to-phone application with no server requirements. It enables a mobile collaborative medium that allows co-workers, alliance partners, or vendors to meet, interact, and communicate. The software automatically searches for associates who are nearby and available for meetings or for buying and selling goods. BEDD alerts users when associates are close so they can meet immediately via Bluetooth wireless technology, IM, SMS, MMS, or e-mail.

Business need: Enables mobile users to meet immediately
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, double-byte Asian characters; other languages available upon request

Contact: Contact: sjc@bedd.com

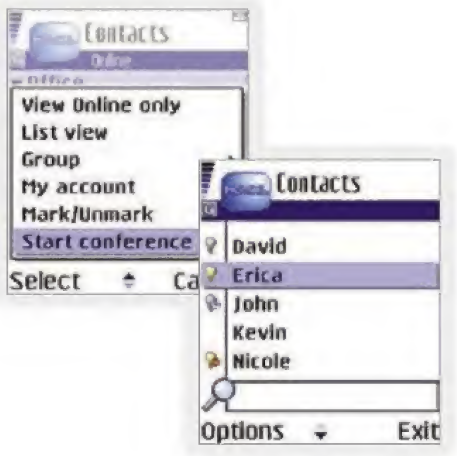

Birdstep Intelligent Mobile IP Client

Birdstep Technology

The Intelligent Mobile IP Client operates with existing infrastructure equipment and VPN solutions to allow secure continuous connectivity between WiFi hotspots and GSM, GPRS, Universal Traffic Management Systems, and CDMA networks. This client allows users to seamlessly connect and reconnect across different types of infrastructures without application downtime, security degradation, or user intervention.

Business need: Allows users to seamlessly connect and reconnect across different types of infrastructures
Works on Series 80 Developer Platform
Enabling technology: Symbian v 7.0s
Language localization: Available upon request

Contact: stefano.holguin@birdstep.com

Connect Instant Conference

Movial

Connect Instant Conference provides users with seamless presence and instant messaging, as well as the possibility to initiate and host conference calls from wireless devices and desktops. Other presence-based services, such as file transfer and video, can be integrated. Connect products support various presence and messaging standards such as SIP/SIMPLE, OMA IMPS, and XMPP.

Business need: Facilitate efficient, seamless communication across mobile devices and desktops
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish, French, Spanish; other languages available upon request

Contact: victor.donselaar@movial.fi

Connect Instant Messaging

Movial

Connect Instant Messaging allows mobile device and desktop users to engage in multiple easy-to-use, real-time conversations while enabling effective management of contacts and conversations. Additional features such as voice, video, and picture messaging are available. Connect products support various presence and messaging standards such as SIP/SIMPLE, OMA IMPS, and XMPP.

Business need: Instant communication, based on presence information, across mobile devices and desktops
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Symbian OS, J2ME
Language localization: English, Finnish, Spanish, French; other languages available upon request

Contact: victor.donselaar@movial.fi

Connect Push-to-Video

Movial

Connect Push-to-Video provides mobile users with video and instant message conferencing enhanced with presence information. Videos are sent and played automatically, allowing users to continuously share personal multimedia content and instant messaging with colleagues. Connect products support various presence and messaging standards such as SIP/SIMPLE, OMA IMPS, and XMPP.

Business need: Instant video and information sharing, presence information
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish, Spanish, French; other languages available upon request

Contact: victor.donselaar@movial.fi

DB2 Everyplace

IBM

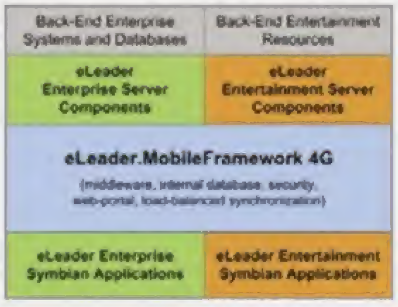

DB2™ Everyplace™ database enables mobile users to achieve data synchronization and rapid application deployment for mobile devices. It offers zero administration, a small footprint, and a standards-compliant relational database for all major mobile devices. DB2 Everyplace Enterprise Edition is a comprehensive mobile database and enterprise synchronization solution. A high-performance synchronization server manages distribution and synchronization of data to mobile workers. The database supports advanced conflict detection with logging and customized resolution, and it integrates with key relational database management system (RDBMS) data sources.

Business need: Enables applications to be used in an offline mode
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Selected Symbian OS devices including the Nokia 9500 Communicator

Contact: kari.huoponen@fi.ibm.com

eLeader.MobileFramework 4G

eLeader

eLeader.MobileFramework 4G is a technology platform for building complex and secure client/server mobile enterprise solutions. It consists of a Symbian OS mobile subsystem with business logic and secure, offline mobile SQL databases. MobileFramework 4G also includes server-side middleware with a transactional and load balanced data transfer engine (SSL encryption), a Web-based portal management subsystem (SSL encryption), and back end systems integration connectors.

Business need: Allows fast implementation of customized smartphone and other mobile platform solutions
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, Polish, Russian; other languages available upon request

Contact: sales@eleader.biz

IM+ Corporate Instant Messenger

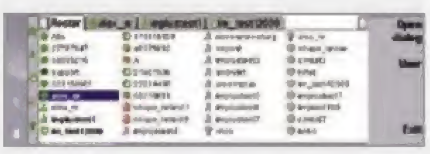

SHAPE Services

IM+ Corporate Instant Messenger is a client/server solution for companies wanting to run their own instant messaging server. The application can be used on various mobile devices as well as desktop PCs and laptops. In addition to instant voice and text messaging services, IM+ Corporate Instant Messenger includes a Web interface for system administration, offline message delivery, secure server access, e-mail notification, group conferencing and news subscription, and instant delivery service. Versions for Windows are also available.

Business need: Provides a solution for companies wanting to run their own instant messaging server
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: Available upon request

Contact: maria@shapeservices.de

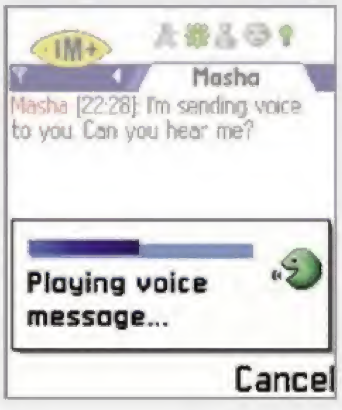

IM+ Mobile Instant Messenger

SHAPE Services

IM+ Mobile Instant Messenger is a complete instant messaging solution for PCs or mobile devices, supporting MSN®, ICQ®, AOL®, Yahoo!® and Jabber® messaging systems. The application allows users to communicate directly from a PC or a mobile device in real time.

Business need: An instant messaging solution for PCs or mobile devices
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Versions for Windows are also available
Enabling technologies: Symbian OS, Java MIDP 1.0

Contact: maria@shapeservices.de

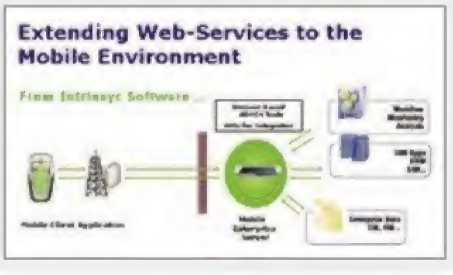

IM+ Voice

SHAPE Services

IM+ Voice is a complete voice messaging solution that allows users to exchange text and voice messages directly from a mobile device as if using a walkie-talkie. IM+ Voice enables voice messaging (voice over IP) in both streaming and non-streaming modes. Mobile users can create new accounts and manage contact lists. The application includes detailed context help, message history, and "copy 'n' paste" support for dialog texts. Versions for Windows are also available.

Business need: Provides voice and text messaging for mobile device and desktop users
Works on Series 60 Developer Platform
Enabling technology: Symbian OS

Contact: maria@shapeservices.de

Intrinsyc Software Enterprise Mobility Server

Intrinsyc Software International

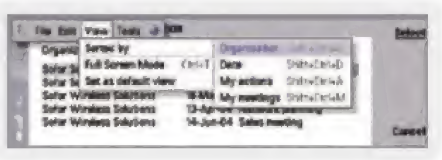

Intrinsyc Software's Enterprise Mobility Server is a development framework that allows enterprise applications to be transparently extended to mobile devices. Incorporating an XML message switch and a set of protocol adapters, it enables message interchange with a variety of common systems including .NET, Distributed Component Object Model, Common Object Request Broker Architecture, and Java Message Service.

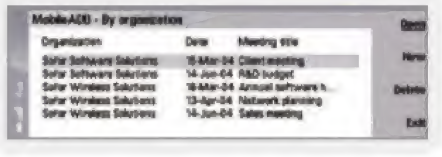

Business need: Enables real-time access to critical enterprise information from any mobile device
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Symbian OS v7.0, Web Services, XML, Microsoft .NET, J2ME
Language localization: English

Contact: ahurdle@intrinsyc.com

Lotus Notes on Nokia Communicators

Sofor

Lotus Notes on Nokia Communicators is an application that synchronizes data over the air from IBM Lotus Domino applications to a native Symbian OS client, enabling users to access Lotus Notes applications offline. The software uses Sofor's Waplane and IBM's DB2e technology.

Business Need: Makes existing Lotus Notes applications available offline for the Nokia 9200 and Nokia 9500 Communicator series and Nokia 9300 smartphone
Works on Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English; other languages available upon request

Contact: michael.holm@sofor.fi

MBX

OnRelay

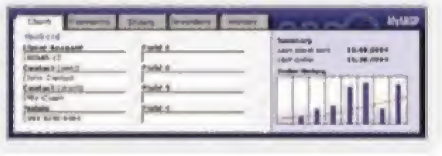

MBX™ (Mobile Branch Exchange) is a client/server software system that transforms a software-based mobile phone into a fully functional private branch exchange (PBX) extension. MBX can autonomously route all incoming and outgoing mobile-phone calls through the office phone system, making employees' mobile phones duplicates of their PBX extensions. MBX allows mobile users access to functions such as fixed-to-mobile handover, corporate directory, corporate voice-mail indication, full missed-call registry, caller ID for calls routed through the PBX, and customizable configuration. MBX is a scalable software-only solution that works over any mobile network and tightly integrates to existing TDM and IP based PBXs.

Business need: Provides full PBX functionality on a mobile phone
Works on Series 60 Developer Platform
Enabling technologies: Symbian OS / CTI
Language localization: English

Contact: marie.wold@onrelay.com

Mermit MISP

Mermit Business Applications

Mermit MISP® (Mobile Integration & Service Platform) is a line of end-to-end, integration and services products for enterprise mobility. The platform consists of GUIs, components, and applications that let enterprises effectively use SMS, MMS, and mobile phone clients in their businesses. Mermit MISP includes a comprehensive set of messaging solutions, from an easy-to-use messaging application to a development platform that enables the rapid building of tailored applications for connecting mobile users to enterprise data. Mermit MISP has been credited as the best SMS/MMS solution by a wide range of companies including Sampo Bank, Comptel, Amadeus, Siemens, and the Finnish Broadcasting Company (YLE).

Business need: Reduce implementation time and cost of new services
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME
Language localization: English, Finnish, French, German; other languages available upon request

Contact: mika.helenius@mermit.com

MobileFAX

BiTween

MobileFAX is software that enables users to send and receive faxes from their mobile phones based on the fax number in their Subscriber Identity Module. Faxes can be viewed and stored on the phones, and users can print them through an infrared or Bluetooth wireless connection. MobileFAX provides full faxing capabilities from a smartphone; it runs in the background and is completely transparent.

Business need: Enables users to send and receive faxes from their mobile phones
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Italian, German, French, Spanish

Contact: bitween@bitween.com

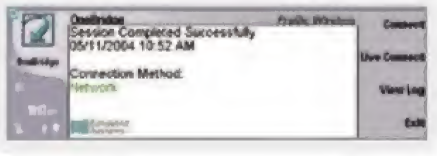

NetFront for Series 60 Internet Browser

ACCESS

NetFront for Series 60 Internet Browser (NetFront v3.2) is a modular Internet browser for mobile phones. It is scalable, allowing the user to customize configurations for specific environments. The NetFront Browser has had over 125 million global deployments and has been recognized as one of the most versatile browsers in the embedded market.

Business need: Provides full Internet access from mobile phones
Works on Series 60 Developer Platform
Language localization: English, French, Italian, German, Spanish, Portuguese

Contact: schmaenk@access-sys-eu.com

OneBridge Mobile Solutions Platform

Extended Systems

The OneBridge Mobile Solutions Platform offers a framework for extending enterprise applications to any mobile device. Built on industry standard technologies such as XML, Web Services, and OMA Data Synchronization, it provides services to connect enterprise applications, deliver data to mobile devices, and connect mobile applications. It also offers an infrastructure so enterprises can securely deploy and manage all mobile devices with a single scalable server platform.

Business need: Provides the infrastructure necessary for securely deploying and managing all mobile devices with a single, scalable platform
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Symbian OS, J2ME, OMA Data Synchronization
Language localization: English

Contact: mdminfo@extendedsystems.com

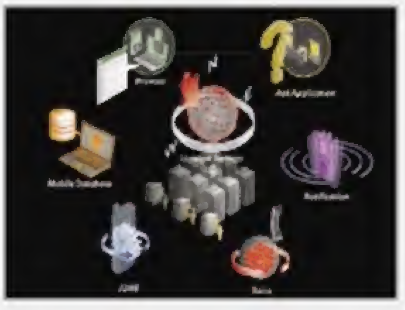

Opera for Mobile

Opera Software

Opera for Mobile enables easy access to the Web directly from a mobile phone. Opera's Small-Screen Rendering™ technology reformats ordinary Web pages to fit inside the screen width of a mobile phone. Opera has been preinstalled on millions of mobile phones and downloaded more than 600,000 times by users.

Business need: To provide and access business information such as corporate intranets and other Web sites
Works on Series 60 Developer Platform
Enabling technology: Symbian OS

Contact: don@opera.com

Oracle Application Server Wireless

Oracle

Oracle Application Server Wireless (OracleAS Wireless) is a comprehensive and flexible wireless and voice platform that lets enterprises deploy wireless browser-based applications, voice applications, notifications, J2ME applications, and two-way messaging (Ask) applications. Built on Oracle Application Server 10g and Oracle Database 10g, OracleAS Wireless provides the most scalable, reliable, and cost-effective mobile infrastructure on the market to implement an enterprise's mobile strategy.

Business need: Facilitates provisioning of mobile voice and data applications
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Language localization: All major European languages, Japanese, Korean, simplified Chinese
Server infrastructure: A component of Oracle Application Server 10g Enterprise Edition, powered by the Oracle Database 10g

Contact: uksales_ie@oracle.com

Oracle Collaboration Suite

Oracle

The Oracle Collaboration Suite is a toolset that lets users integrate Web conferencing, content management, e-mail, voice mail, and calendar applications. Information can be stored and made searchable using an Oracle database. The Collaboration Suite also works with wireless and voice access, allowing users to access e-mail and voice mail, manage appointments, and access corporate directories. Users can browse and fax shared online files from any mobile device with browser capability, via speech from any telephone, or instantly by SMS.

Business need: Lets mobile employees share, collaborate, and access their desktops
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: All major European languages, Japanese, Korean, simplified Chinese
Server infrastructure: Oracle Database 10g and Oracle Application Server 10g (both included)

Contact: uksales_ie@oracle.com

Remote Control 2

BiTween

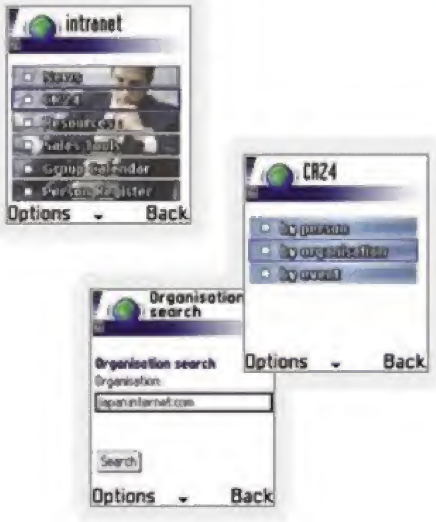

Remote Control 2 gives users remote, on-the-fly access to PCs connected to the Internet or through a VPN connection. The application provides convenient access to e-mail, files, Web server admin, programs, and network resources from home or the road. In addition to enabling quick and flexible access from anywhere, Remote Control 2 is easy to install and use. The application is also a cost-effective and user-friendly alternative to other remote-access technologies.

Business need: Enables mobile users to connect to their PCs using a Nokia communicator
Works on Series 80 Developer Platform
Enabling technology: Server component on the PC
Language localization: English, Italian, German, French, Spanish

Contact: bitween@bitween.com

Waplane 2.5 for Business Collaboration

Sofor

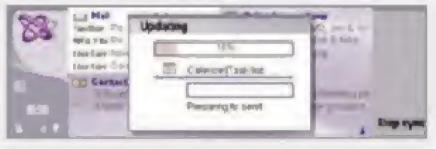

Waplane 2.5 for Collaboration enables online access to existing information systems while mobilizing business applications and databases. It includes a Rapid Application Development (RAD) tool that allows for easy definition of the data to be mobilized, show how to present the data in mobile devices and show where to retrieve or save the information on the corporate database servers.

Business need: Access critical corporate applications securely anywhere at any time from any device
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2EE, VML, XHTML, HTML
Language localization: English, Finnish, Spanish, Norwegian, Danish, Russian, Italian, French, Greek, Polish; includes language customization tools

Contact: michael.holm@sofor.fi

WebSphere Everyplace Access

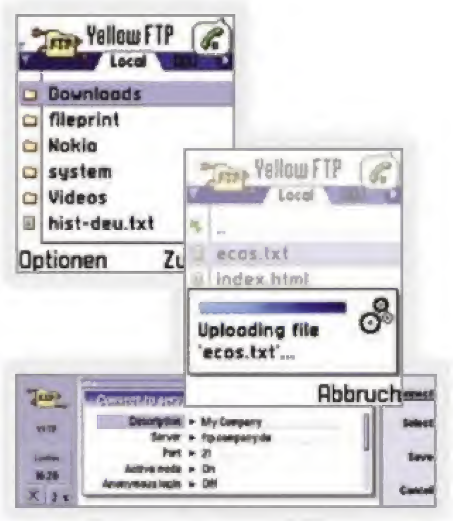

IBM

WebSphere® Everyplace™ Access (WEA) gives mobile employees access to productivity data and enterprise applications from devices such as the Nokia 9500 Communicator. WEA delivers sales order status and customer information to field sales professionals and provides real-time machine outage notifications to field technicians. WEA gives Nokia 9500 Communicator users remote access to real-time e-mail, personal information manager (PIM) data, IM, and business applications. It provides enterprises with a solution that is appropriate to current business needs and can be scaled to a richer wireless-application solution as the business grows.

Business need: Provides mobile sales and field workforce with access to the company's office environment
Works on Series 80 Developer Platform
Enabling technology: Selected Symbian OS devices including the Nokia 9500 Communicator

Contact: kari.huoponen@fi.ibm.com

YFTP

Yellow Computing

YFTP is an FTP client for Nokia phones. It enables users to upload files and images from a mobile device directly to any FTP server. YFTP can be used to publish photos immediately on a Web site and to transfer files. YFTP also enables users to switch between local and remote file systems.

Business need: Lets users access FTP servers with their mobile phones
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German; other languages available upon request
Server infrastructure: Any FTP server

Contact: dominik.nied@yellow.de

Yomi Click to Connect

Yomi

The Yomi Click to Connect service makes and connects calls immediately among selected participants from multiple telephone networks. A group call can be initiated with just a few keystrokes on a user's mobile phone, PDA, or PC. Calls can also be scheduled in advance by entering a date and time and selecting participants. The service sends an automatic reminder to all participants and connects their lines on the right day at the right time.

Business need: Enables users to automatically set up and manage group calls
Works on Series 40 Developer Platform, Series 60 Developer Platform
Enabling technologies: Symbian OS, J2ME
Language localization: English, Finnish, Swedish

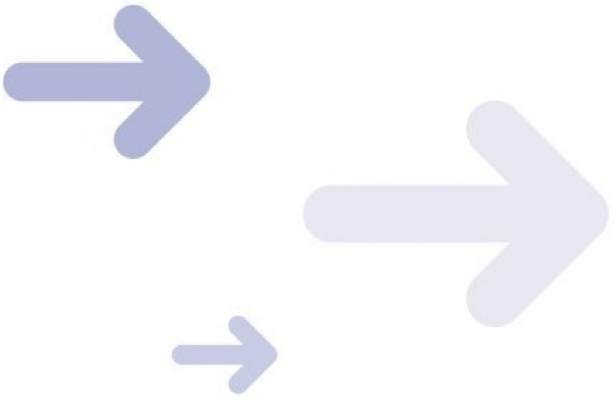

Contact: tom.arppe@yomi.com

www.forum.nokia.com/enterprise

Business E-mail & PIM

ADnota PMA

adnota

The ADnota Personal Memo Assistant is a tool that enables fast and easy recording and retrieval of personal voice and multimedia memos with a mobile device. Users can enrich recordings with photos, video and sound clips, and text notes. Memos can be retrieved by searching for voice tags, location (based on cellular ID or Bluetooth GPS), date, or text.

Business need: Easy recording and retrieval of information in a mobile phone
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German

Contact: jw@adnota.com

BlackBerry Connect

Research In Motion

BlackBerry Connect enables the Nokia 6820 messaging device, the Nokia 9300 smartphone, and the Nokia 9500 Communicator with BlackBerry® Push technology. BlackBerry Connect on Nokia phones allows users to leverage the benefits of BlackBerry wireless services, including BlackBerry Enterprise Server™ and BlackBerry Internet Service™. Users can connect with e-mail and other data applications.

Business need: Connectivity to the BlackBerry Enterprise Server or BlackBerry Web Client using the Nokia 6820, Nokia 9300 smartphone, or Nokia 9500 Communicator
Works on Series 80 Developer Platform
Enabling technology: Symbian OS

Contact: dproulx@rim.com

Communigazer

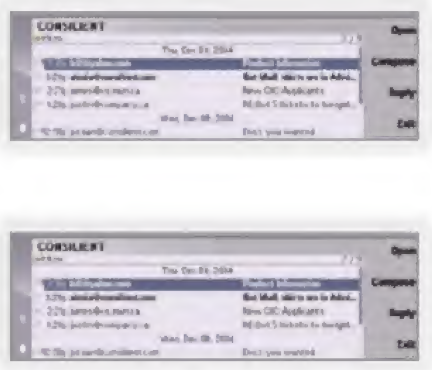

mElement

Communigazer® enables secure access to corporate Microsoft Exchange servers for mobile phone users without using third-party service providers or gateways. Optimized for use with Exchange servers, Communigazer provides fast and secure access to all major Exchange functions without requiring modifications to current Exchange or active directory environments. Communigazer allows the server to perform all functions related to attachments and synchronization, minimizing traffic between phone and server.

Business need: Enables secure remote access to corporate Exchange server accounts
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish; other languages available upon request

Contact: sales@melement.fi

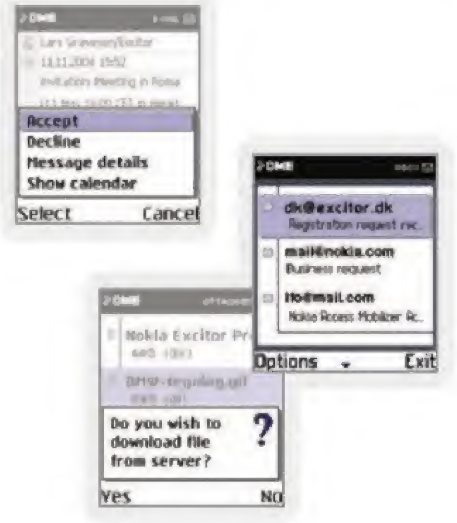

CONSILIENT

CONSILIENT

Consilient® software delivers innovative wireless Push solutions and enterprise applications for messaging platforms on Nokia phones. The Consilient solution uses the open P-IMAP standard for wireless messaging and personal information management (PIM) access. Consilient also uses Open Mobile Alliance (OMA) Data Synchronization (SyncML) to facilitate calendar access on multiple mobile devices.

Business need: Lets mobile users access e-mail and calendar regardless of platform, network carrier, or device, with a lower total cost of ownership and ease of deployment
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Java MIDP 1.0 and 2.0
Language localization: English

Contact: sales@consilient.com

DME Secure Push E-mail and PIM Sync

Excitor

DME Secure Push E-mail and PIM Sync gives enterprise users secure synchronization over the air with Lotus Domino or Microsoft Exchange. It provides a secure e-mail and PIM synchronization environment by using Advanced Encryption Standard (AES) 128-bit encryption. DME Secure Push E-mail and PIM Sync can be integrated with Lotus Domino and Microsoft Exchange to facilitate e-mail, calendar, contact, and task synchronization. All e-mails and meetings are pushed to the device, so users can respond instantly and even accept meetings on the fly.

Business need: Provides a secure e-mail environment and PIM synchronization
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Symbian OS, C++
Language localization: English and Scandinavian languages; other languages available upon request
Server infrastructure: DME J2EE server (Linux running JBOSS, IBM Websphere, or BEA Weblogic)

Contact: kv@excitor.dk

InfoTalk-VoiceDial

InfoTalk

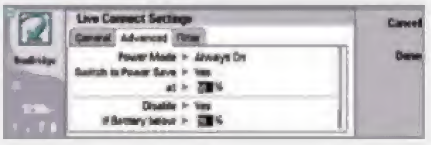

InfoTalk-VoiceDial enables users to make a phone call by just speaking a name from their mobile phone book. The application is easy to use, with no training or prerecording required. Users can also launch applications by voice command or make phone calls by speaking the digits.

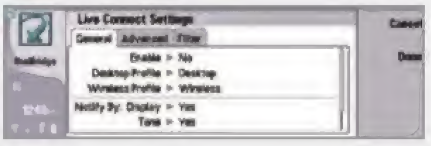

Business need: Allows users to find numbers and make phone calls via voice commands
Works on Series 60 Developer Platform
Enabling technologies: Symbian OS v6 and higher
Language localization: English, Chinese Putonghua, Chinese Mandarin, Chinese Cantonese

Contact: dennis.wee@infotalkcorp.com

OneBridge Mobile Groupware

Extended Systems

OneBridge® Mobile Groupware, Extended Systems' mobile e-mail solution, provides real-time access to e-mail, contacts, calendars, and notes in Microsoft Exchange, Lotus Notes, and Novell GroupWise. OneBridge allows enterprises to manage and control access to mission-critical information from a variety of mobile devices via any type of network connection.

Business need: Allows access to e-mail and PIM information, provides a central management for mobile devices, enables security for mobile devices
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: Symbian OS, J2ME, OMA Data Synchronization
Language localization: English

Pdf+

mBrain Software

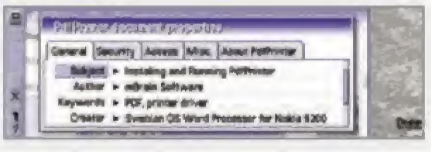

Pdf+ allows mobile users to access information in PDF files on their mobile devices. Text can be wrapped to fit the device screen. Users can display PDF files they have stored on their devices, as well as PDFs that are attached to e-mails. Pdf+ enables users to read password-protected PDF files and display text, line drawings, and images in a PDF file. With Pdf+, users can also view and follow bookmarks in PDF files, as well as search for and follow links. PDFs can be sent via e-mail, infrared connection, or Bluetooth wireless technology.

Business need: Lets users access PDF files on mobile phones
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS

Contact: svdwal@mBrainSoftware.com

PdfPrinter

mBrain Software

PdfPrinter allows mobile users to create PDF files from Word documents or spreadsheets on the Nokia 9200 Communicator series. Users can define properties of the PDF files they create, including title, author, and subject. The PDF files can be encrypted and backed up, viewed on a PC, or e-mailed.

Business need: Lets users create PDF files on the Nokia 9200 Communicator series
Works on Series 80 Developer Platform
Enabling technology: Symbian OS

Contact: svdwal@mBrainSoftware.com

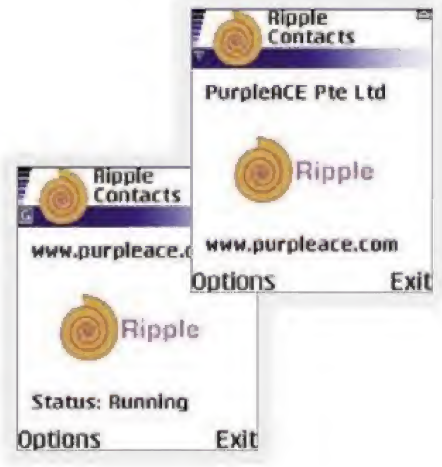

Quickoffice Premier

Mobile Digital Media

Quickoffice Premier is a software suite that includes Quicksheet, Quickword, and Quickpoint. It enables smartphone users to open, view, and edit Microsoft Office (Word, Excel, and PowerPoint) files, e-mail attachments, and MMS attachments in native file format (DOC, XLS, and PPT). The files can be saved on removable memory expansion cards or sent wirelessly through e-mail, Bluetooth connection, or infrared connection.

Business need: Enables mobile users to open, view, and edit Microsoft Office files
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: Localized into more than 35 languages

Contact: craig.senick@gomdm.com

Ripple Contacts

PurpleACE

Ripple Contacts is a Symbian client that connects to a network-based address book management tool. Users can manage their mobile contact information via a Web browser from an Internet-enabled PC, a standard WAP browser, or via SMS. Operating completely in the background, Ripple Contacts synchronizes changes made on the phone with the network address book, automatically replicating changes made on either address book to the other.

Business need: Automatic mobile phone address book management
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: brojo@purpleace.com

Smartner Always-On Mail

Smartner Information Systems

Smartner Always-On Mail automatically pushes e-mail and calendar data to a wide range of smartphones. User-friendly and utilizing the device's native e-mail and calendar applications, the application mirrors instantly any changes from the mobile device to the desktop and vice-versa. In addition, Always-On Mail enables viewing, editing, and sending of native attachments.

Business need: Improves productivity, speeds up enterprise processes, and keeps total cost of ownership to a minimum
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: Global language support

Contact: jussi.raisanen@smartner.com

SysRoam

Syscrypt

SysRoam lets roaming users remotely check their left-behind local mobile number for messages and missed calls. SysRoam also enables access to phone numbers, addresses, and other information on smartphones at other locations.

Business need: Access to information stored on phones at other locations
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: gkassab@syscrypt.com

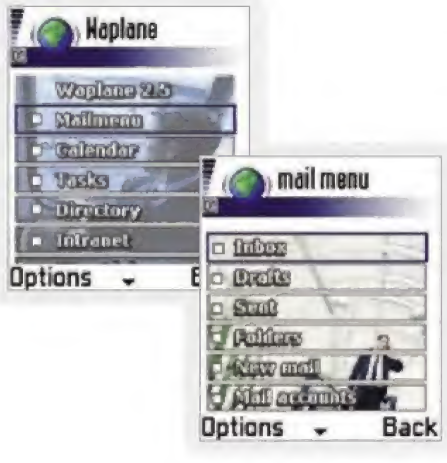

Visto Mobile

Visto

Visto Mobile™ is Visto's broad and open carrier-grade service delivery platform for wireless access to corporate and personal e-mail and PIM data. The platform enables mobile operators to provide continuously synchronized, reliable, secure mobile access to corporate and personal e-mail, calendar, and address book data on all popular mobile devices and networks globally.

Business need: Provides instantaneous, automatic two-way delivery of e-mail, contact information, and calendar updates
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Language localization: Available upon request

Contact: Sales@visto.com

Waplane 2.5 for E-mail and PIM

Sofor

Waplane 2.5 for E-mail and PIM enables mobile access to personal information manager (PIM) functions such as e-mail, calendar, task lists, and directories. It includes an IBM Lotus Domino Connector for greater performance of traditional e-mail and PIM services and a new connector native to Microsoft Exchange. Waplane enables richer attachment handling for Push, uploads, downloads, and attachment launches.

Business need: Access e-mail and PIM securely anywhere, at any time, from any device
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2EE, VML, XHTML, HTML
Language localization: English, Finnish, Spanish, Norwegian, Danish, Russian, Italian, French, Greek, Polish; includes language localization tools

Contact: michael.holm@sofor.fi

Widian MyCalendar

Widian

MyCalendar synchronizes data between users' desktops and the calendars on their mobile phones with OMA Data Synchronization (SyncML). MyCalendar runs in the background and the synchronization process is automatic. Users receive visible and audible notifications when calendar data has been modified. Users are also provided with listings of new or modified calendar entries. Calendar entry lists can be sorted by different criteria.

Business need: Enables synchronization of mobile and desktop calendars
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Server infrastructure: OMA DS server

Contact: jari.huttunen@widian.fi

Widian MyMail

Widian

MyMail automatically delivers e-mail messages to mobile phones and regularly updates e-mail accounts according to a user's preferences. MyMail notifies the user of new e-mail messages, displaying the arrival time of the latest message, the number of unread messages, and the total number of messages in the mailbox.

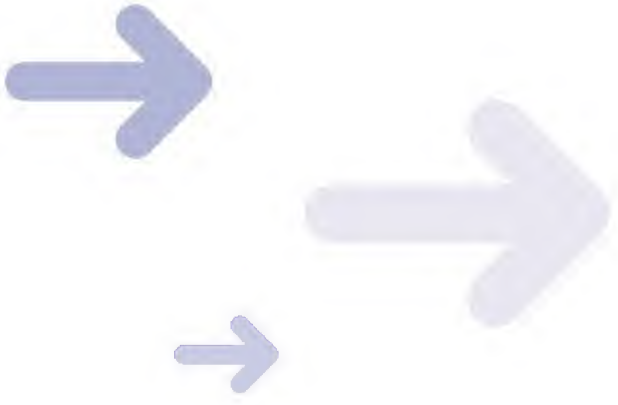

Business need: Enables automatic e-mail delivery to mobile phones
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Server infrastructure: IMAP/IMAPS-enabled servers

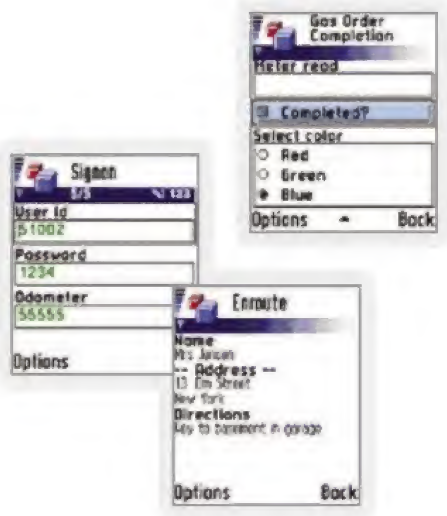

Contact: jari.huttunen@widian.fi

Business Process Mobilizer

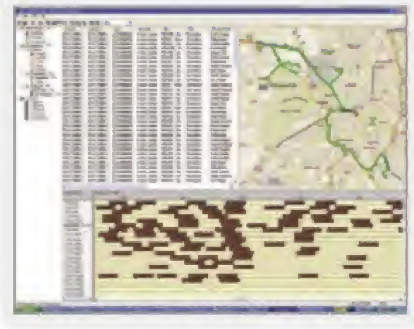

Advantex Mobile

MDSI

Advantex Mobile is an application used by technicians and supervisors in the field to increase customer service through efficiency. Advantex Mobile helps users manage customer commitments by facilitating effective workload prioritization and allocation. It provides access to the information on customers, parts, installed services, and accounts that is needed to successfully complete work while tracking field workforce activity. Advantex Mobile also equips technicians with the information and tools needed to upsell services and measure customer feedback on work progress, which helps users understand overall work performance across their enterprise.

Business need: Allows users to effectively manage field operations while achieving high levels of customer service
Target audience: Utility, telecommunications, broadband, and field service providers
Works on Series 60 Developer Platform
Enabling technology: J2ME
Language localization: Available upon request

Contact: info@mdsi.ca

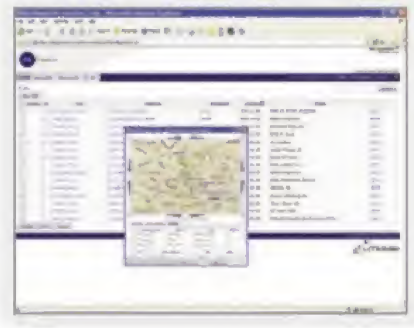

Blå Coordinator

isMobile

Blå Coordinator™ provides a comprehensive work-order management system for large service companies with mobile staffs. It is an integrated end-to-end FFA solution designed to efficiently support a broad spectrum of business processes involved in workforce management. The solution gives support for handling changes in daily operations more effectively, providing resource efficiency and overall improvement in customer service. Mobile resources communicate with the system through smartphones or PDAs in customer-defined reporting templates. Blå Coordinator is fully integrated in the customer's ERP-system, and can be completely tailored to the customer's own work processes.

Business need: Provides more efficient communications between companies, field technicians, and customers including information from ERP-systems previously not available in the field, service history etc. Allows full real-time reporting and reduces administrative paper-work
Target audience: Large companies with a mobile workforce
Works on Series 80 Developer Platform
Enabling technology: J2ME
Language localization: English, German, Spanish, Swedish

Contact: leif.hedlund@ismobile.com

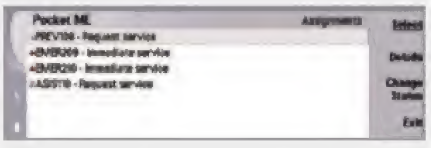

Blå Dispatcher

isMobile

Blå Dispatcher™ is an operator-based work-order management solution aimed at small- and medium-sized companies. It handles the complete flow for work orders, including creation, assignment, and reporting. Blå Dispatcher delivers information to phones using SMS or GPRS on a Java application. Blå Dispatcher is a stand-alone solution that uses Web-based scheduling and standard mobile phones so no complex integration with end-user business systems is required.

Business need: Provides real-time two-way communications for mobile workforce scheduling, re-scheduling, and reporting with a minimum of investment and implementation for the company
Target audience: Small companies with a mobile workforce
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME
Language localization: English, German, Spanish, Swedish

Contact: leif.hedlund@ismobile.com

Blå Professional

isMobile

Blå Professional™ is a hosted mobile-workforce application aimed at small- and medium-sized companies with larger field operations. This application provides work-order creation, scheduling, assignment, and reporting. Blå Professional facilitates intelligent scheduling by combining real-time assignment data and mobile workers' skills, location, and availability. Work orders are delivered to the right resource via GPRS to a Java application. Blå Professional is available in a series of standardized packages for different vertical markets. Additional customizations (for example, integration with enterprise resource planning [ERP] systems, reporting templates, and Web interfaces) are easily made.

Business need: Enables real-time scheduling of work orders for more efficient use of mobile workforces
Target audience: Small and medium sized companies with a large mobile workforce
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME
Language localization: English, German, Spanish, Swedish

Contact: leif.hedlund@ismobile.com

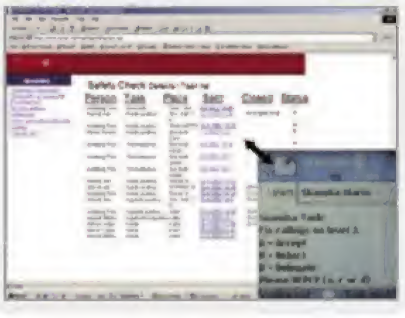

BookIT DDM mCheck-In Solution

BookIT

The BookIT DDM mCheck-In solution lets airlines offer automated, wireless customer check-in. It also enables two-way dialog between the customer and the check-in system, from initiating check-in to seat and gate confirmation. The airline check-in solution automatically sends a reminder to a customer's GSM phone before the flight and asks if he or she wants to check in using a mobile phone. Once check-in is confirmed, the traveler is provided with a gate number. The solution works with any GSM phone; no client software or training is required.

Business need: Enables wireless automated check-in services for airline customers
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Language localization: English; other languages available upon request

Contact: jukka.salonen@bookit.net

BookIT DDM Mobile Activity Tracker

BookIT

BookIT DDM Mobile Activity Tracker is a field-force solution for large enterprises that provides real-time alerts and facilitates authenticated transactions on any mobile phone. Multiple notifications, requests, and tasks can be distributed simultaneously to all users. Enterprises can rapidly reconfigure dynamic business processes to flow freely across organizational boundaries and international borders. Users also can create dialogs in any language with the application's dialog editor.

Business need: Enables wireless field-force tracking for large enterprises
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Server infrastructure: Java client software or own software; fixed IP number

Contact: jukka.salonen@bookit.net

BookIT DDM Mobile Process Integration Tool

BookIT

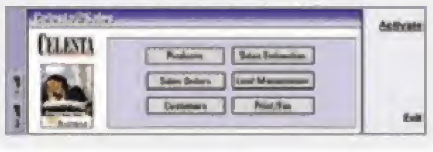

BookIT DDM Mobile Process Integration Tool is a package of licensed software that allows enterprise IT departments and systems integrators to create services using DDM technology. BookIT mediator, mobile dialog editor, XML toolset, Java client services, and a design framework enable mobile processes that connect customers to employees and the back office.

Business need: Facilitates the creation of mobile applications based on DDM technology
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Server infrastructure: Java client software or own software; fixed IP number

Contact: jukka.salonen@bookit.net

CELESTA Smart Forms 2

Celesta

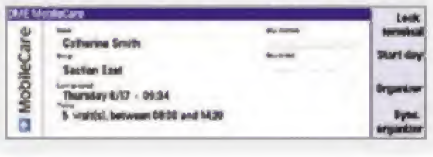

CELESTA Smart Forms 2 is a wireless-application framework for running customer-specific wireless enterprise applications on any of the supported mobile platforms for communicators, smartphones, and PDAs. The applications are described in CELESTA mBusiness Markup Language (mBML) with CELESTA mBuilder. This approach allows application designers to gain maximum benefits of the mobile platform while maintaining portability between different operating systems and mobile platforms.

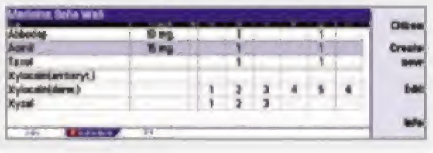

Business need: Provides a wireless-application framework for running customer-specific wireless enterprise applications
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: French, German; other languages available upon request

Contact: sakari.vaara@celesta.com

DME MobileCare

Excitor

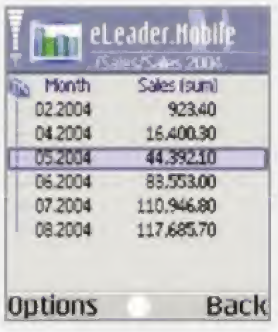

MobileCare provides social workers and nurses with mobile access to local social care and hospitals systems. The application includes a daily planner plus access to medical journals, medicine overviews, journals, and each patient's main data. Services and data are delivered via two-way secure data transmission functionality delivered directly to the device. All data can be updated on the mobile device and sent back to the main system and stays encrypted at all times even on the terminal. MobileCare can be used with any available network including GSM, CDMA, GPRS, EDGE, 3G, or wireless LAN.

Business need: Enables information to be updated remotely, delivers assignments directly to users
Target audience: Health care professionals, hospitals, and government
Works on Series 80 Developer Platform
Enabling technology: J2ME
Language localization: English and Scandinavian languages; other languages available upon request
Server infrastructure: DME J2EE server (Linux running JBOSS, IBM Websphere, or BEA Weblogic)

Contact: kv@excitor.dk

eLeader.MobileReport 4G

eLeader

eLeader.MobileReport 4G is a platform that provides traveling managers and other mobile workers with secure business reports generated by integrated enterprise back office systems. It allows users to view graphs and extensive alphanumeric reports with special drill-down interfaces customized for smartphone screens. This solution is based on the eLeader. MobileFramework platform. Pilot implementations available.

Business need: Lets traveling managers and workers access corporate reports via smartphones
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, Polish, Russian; other languages available upon request

Contact: sales@eleader.biz

eLeader.MobileSales/Merchandising 4G

eLeader

The eLeader.MobileSales/Merchandising 4G application is a customizable client/server mobile solution that helps enterprises streamline mobile business processes. The application enables complex fieldwork planning, order processing, sales management, inventory tasks, out of stock reports, price reports, notes, project management, and many others. It facilitates custom form and survey design complete with business logic. The application also handles workflow management, multimedia (voice, photos, video), and mobile access to corporate systems (ERP/CRM/EDI). It operates with eLeader.MobileFramework technology. Pilot implementations available.

Business need: Streamlines complex field force business processes
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, Polish, Russian; other languages available upon request

Contact: sales@eleader.biz

Eliad XML-Run

Eliad Technologies

Eliad's XML-Run software, based on XML and Java, facilitates the rapid development of secure mobile enterprise solutions, with online and offline capabilities, that connect existing corporate backend systems with PDAs and mobile phones such as Nokia 7650, Nokia 3650, Nokia 6600, Nokia 6670, and Nokia 9500 Communicator. With XML-Run, custom applications (connected to IBM WebSphere, BEA WebLogic, Sun JES, Oracle, and others) as well as packaged solutions (connected to SAP, Siebel, Oracle, PeopleSoft, and others) can be quickly delivered (about a month) and can be remotely installed and updated with server Push technology.

Business need: Enables custom mobile application development, field force automation, sales force automation, localization, inventory management, resource management, real-time financial applications, and more
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME
Language localization: Easy translation into multiple languages

Contact: alana_davis@eliad.com

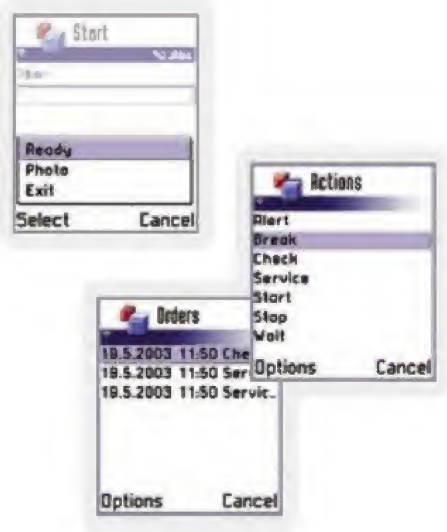

FLEX

Yellow Computing

The FLEX workflow application features freely definable DB structures, data masks, and workflows via XML-definitions. The application also features offline capability, and it supports open communication standards and encryption. From recording an order to managing a company's technical service, the FLEX system can be customized to include a broad range of options.

Business need: Lets users create custom database structures for mobile devices
Works on Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German
Server infrastructure: FTP server

Contact: dominik.nied@yellow.de

ISMO (Fleet Management)

Sybase

ISMO® uses GPS to collect real-time data on a vehicle's position, speed, and direction. It also registers vehicle stops, reasons for those stops, and their duration. This information can be linked to vehicle technical data — such as braking activity, fuel consumption, and temperature — to form a detailed picture of what the vehicle is doing at any time.

Business need: Allows for mobile management of fleet vehicles
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME
Language localization: Finnish, English, Swedish; other languages available upon request

Contact: kim.ekman@sybase.com

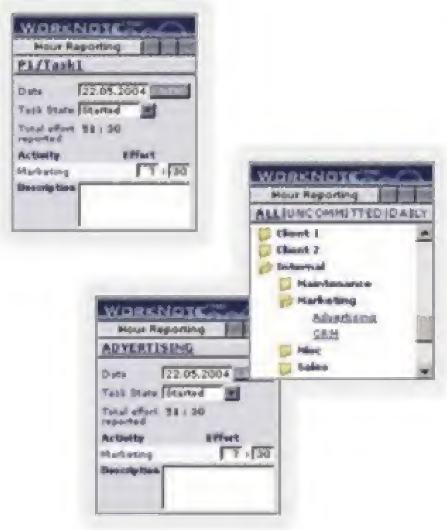

MASi (Sales Force Automation)

Sybase

MASi™ mobile solution is designed to enhance the effectiveness of mobile sales forces. It can be customized for individual organizations' specific needs. In addition to facilitating traditional sales functions, MASi is also suitable for scheduling maintenance work, managing a spare-parts inventory, and communicating alerts.

Business need: Allows for mobile management of sales personnel
Works on Series 80 Developer Platform
Enabling technology: J2ME
Language localization: Finnish, English, Swedish; other languages available upon request
Server infrastructure: Windows, UNIX, Linux server platform

Contact: kim.ekman@sybase.com

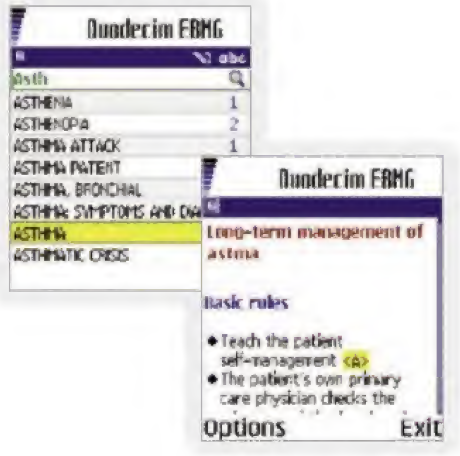

Mermit WorkNote

Mermit Business Applications

Mermit WorkNote™ enables mobile field force and project management. Managers can review and update project activities anywhere, anytime. WorkNote lets project team members submit hours, execute project reports, send images and RFID tags directly to the reporting system, and access other project information with a mobile device. With on-the-spot access to data and the ability to upload information to the project server, the application helps project managers and team members improve project efficiency.

Business need: Manage server-based project management information using mobile devices
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish, French, German; other languages available upon request

Mobile Evidence-Based Medicine Guidelines

Duodecim Medical Publications

Evidence-Based Medicine Guidelines is a collection of more than 1,000 concise treatment guidelines for the most common diseases and symptoms. The databases also include a comprehensive drug database, with more than 2,000 drug information articles, a collection of ICD-10 diagnostic codes, an intensive care database, and a high-resolution dermatological image database. The core databases and Cochrane abstracts are stored on a mobile device's memory card. The drug price database can also be updated wirelessly in one-to-two minutes.

Business need: Provides mobile access to updated and reliable medical information
Target audience: Medical professionals
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish

Contact: matti.seppanen@duodecim.fi

Navicore Pro

Navicore

Navicore Pro is a fully-featured field force management solution with integrated maps and GPS navigation.

Business need: Resource planning for field maintenance, installation, sales force management, and transportation work
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish, Swedish; more European countries during 2005

Contact: petri.junnilainen@navicoretech.com

Net2Send

Netsize

Net2Send enables SMS communication with individuals and groups for customer relationship management, enterprise resource planning, supply chain management, and direct marketing. Net2Send features include predefined messages, traffic reports, usage statistics, recipient address importing, address book, and predefined sending schedules. Net2Send is accessible anytime, through any Web connection.

Business need: Enables SMS communication with individuals and groups
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: J2ME, Symbian OS
Language localization: Available upon request

Contact: info.fi@netsize.com

OI Inventory

Scanbuy

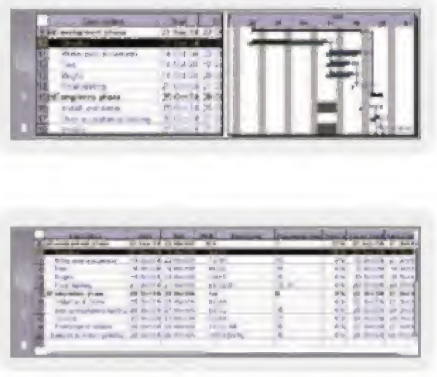

OI Inventory allows mobile users to enter inventory information into and retrieve it from company systems, using a camera phone and optical bar-code-capture technology. OI Inventory combines a client application and a middleware platform connected to the customer's inventory database.

Business need: Allows mobile users to access or enter information via bar-code scanning
Works on Series 60 Developer Platform
Enabling technologies: J2ME, Symbian OS

Contact: ashish.muni@scanbuy.com

Plan

Twiddlebit Software

Plan is a project-planning application for the Nokia Communicator series. Users can enter task and resource information and create dependencies among tasks. Plan will calculate each task's duration and the entire project schedule. A Gantt view is included. Plan can be used as a stand-alone project planner or in conjunction with PC-based project planning software such as Microsoft Project or Twiddlebit's own PC version of Plan.

Business need: Enables the mobile business user to view and update their project plans at any time
Works on Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: sales@twiddlebit.com

Pocket WISE for CRM

eScience

Pocket WISE's Sales Order and Call Plan modules allow mobile customers and sales representatives to place orders and submit activities for the day. Lists of customers and products can be synchronized with a corporate database, and reports are generated and submitted in real time. The data sent can be automatically pushed to corporate customer relationship management (CRM) applications, such as SAP and Oracle. Activities are received through Web reports. New products and customers are added to the host database through the Web interface.

Business need: Allows mobile users to place orders and submit activities for the day
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: richie.f@electronicscience.net

Pocket WISE — Retail and Call Plan For Series 60

eScience

eScience's Pocket WISE application makes it easy for field personnel to submit their activities to host applications using GPRS, EDGE, and other wireless technologies. Pocket WISE is easily customizable, and the data sent to the host server may be exported to other activity-monitoring systems. Pocket WISE can also be integrated with imaging phones.

Business need: Allows users to submit their activities to host applications
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: richie.f@electronicscience.net

Polaris

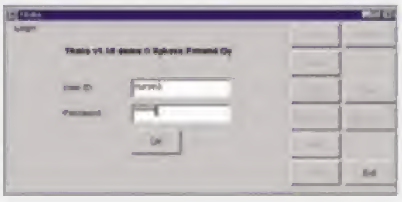

Telmap

Polaris™ Mapping and Navigation System provides Java devices with continuously updated maps, points-of-interest, turn-by-turn directions, and accurate voice instructions to reach any destination from any location across the globe. Polaris makes it simple to locate a customer's address, get to a meeting, look up restaurants, make direct-dial reservations, or find the nearest taxi station.

Business need: Provides mobile mapping, full navigation, and travel information
Target audience: Mobile professionals
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Java MIDP 2.0
Language localization: English; other languages available upon request

Mobile Security

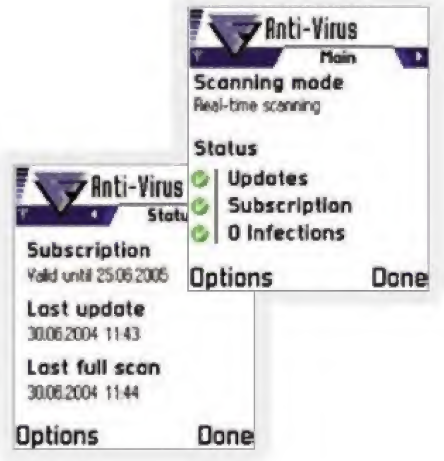

Cognima Safeguard

Cognima

Cognima Safeguard™ keeps personal data safe on a secure Internet server, enabling lost data to be restored easily to a new mobile device. The data can be edited on the server via a Web interface. Changes to data made on the phone are instantly updated on the server, and vice versa; there is no need to schedule a backup or perform data synchronization.

Business need: Secure, continuous backup of phone address book and personal settings, and remote editing via the Web
Enabling technology: Symbian OS

Contact: bill.tickner@cognima.com

F-Secure Mobile Anti-Virus

F-Secure

F-Secure Mobile Anti-Virus™ is a comprehensive solution for protecting mobile devices against harmful content, including malformatted messages and malfunctioning applications. It provides real-time on-device protection with automatic over-the-air (OTA) antivirus updates through a patented SMS update mechanism or HTTPS connections.

Business need: Protection of mobile devices against harmful content
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, French, Italian, Spanish, Finnish

ImageSpy

Digia

ImageSpy enables an imaging phone's camera to observe an area such as a main entrance, back yard, or vehicle and raise an alarm when motion is detected. ImageSpy can be set to save the image and send it as an MMS message, or it can initiate a phone call, play a selected audio file, or send an SMS message. The application can also continuously monitor a target, recording and reporting all activities over an extended period of time.

Business need: Enables any Series 60 device to monitor its surroundings and send an alarm when it detects motion
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English

Contact: productsupport@digia.com

Mermit PrivatCom

Mermit Business Applications

Mermit PrivatCom™ is a personal data manager that provides a safe and convenient place to store confidential data such as contacts and messages or user names and passwords. The user can save data directly to the password-protected application or import it from the phone's contact list or a message folder. Data is then encrypted so that no one but the user has access to personal files and confidential information — even when the phone is on and unlocked or shared with others. PrivatCom can also be configured to filter and encrypt messages sent, or phone calls made, from specified phone numbers so they cannot be accessed without entering a PIN.

Business need: Protect confidential business data on mobile devices
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Finnish, French, German; other languages available upon request

Contact: mika.helenius@mermit.com

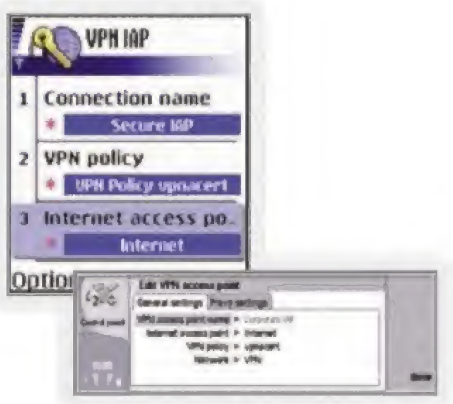

mobileKeeper

MobiComp

mobileKeeper™ lets users archive and recover critical information stored on mobile phones, such as contact lists, calendars, text messages, tasks, multimedia messages, images, videos, ring tones, games, and Java applications. The mobileKeeper engine can be integrated with various kinds of applications and platforms, including operator or company PIM devices, online photo albums, and OMA Data Synchronization servers.

Business need: Provides security for personal information on mobile phones
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, Spanish, Portuguese; other languages available upon request

OneBridge Mobile Secure

Extended Systems

OneBridge Mobile Secure provides OneBridge customers with enterprise-class mobility management capabilities including enhanced access control, on-device data encryption, and permissions management. It gives administrators control and flexibility in managing mobile users, mobile devices, and mobile data, whether the device is always connected, periodically connected, or unconnected to the enterprise.

Business need: Provides security for enterprise mobile devices
Works on Series 80 Developer Platform (Q1 2005)
Enabling technologies: Symbian OS, J2ME
Language localization: English, German, Spanish, Italian, French

Contact: mdminfo@extendedsystems.com

Pointsec for Symbian OS

Pointsec

Pointsec for Symbian OS is a file encryption application that provides protection for Symbian OS devices against unwanted information disclosure. Using on-the-fly, user-transparent encryption, Pointsec for Symbian OS automatically encrypts all files before they are stored on a device and automatically decrypts the files again when they are opened, without user intervention. Pointsec for Symbian OS combines mandatory access control, automatic data encryption, central administration, and remote help for the Nokia 9200 and Nokia 9500 Communicator series and Nokia 9300 smartphone and memory cards.

Business need: Provides encryption for sensitive data
Works on Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English; other languages available upon request

Contact: sales@pointsec.com

Pointsec Media Encryption

Pointsec

Integrated with Pointsec for PC or on its own, Pointsec Media Encryption protects and encrypts sensitive data on memory cards, storage media, floppy disks, and in transit by e-mail. For the mobile enterprise, Pointsec Media Encryption ensures that security policies are easy to distribute and enforce across the organization.

Business need: Provides encryption for sensitive data
Language localization: English, Japanese
Server infrastructure: A shared network accessible by installed clients

Contact: sales@pointsec.com

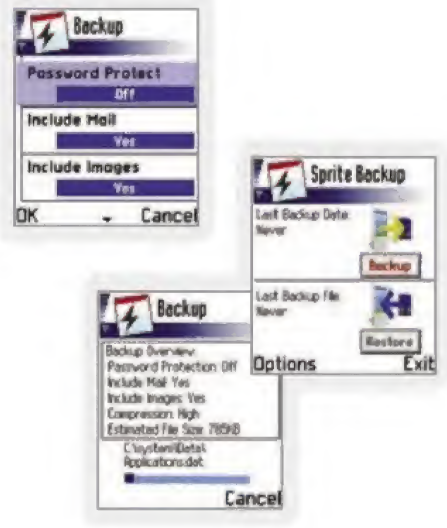

SecLoc

Mohito Networks

SecLoc is client/server software for mobile labor management applications. This application suite enables the use of mobile devices as virtual badges and time-and-attendance terminals. SecLoc, running on a mobile phone, seamlessly integrates with enterprise-level time-and-attendance and labor-management systems. It provides over-the-air (OTA) provisioning of access rights, robust user authentication, and door proximity and presence detection. SecLoc is deployable on most phones.

Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: J2ME

Contact: jouni.koljonen@mohito.biz

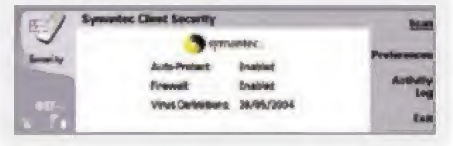

Sprite Backup for Symbian

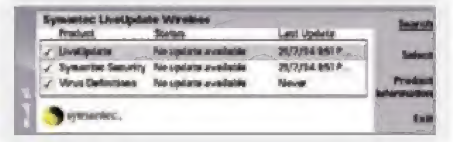

Sprite Software

Sprite Backup for Symbian protects data on mobile devices by facilitating regular backups, enabling users to recover information in the case of a lost mobile device or accidentally deleted data.

Business need: Protects data on mobile devices by facilitating regular backups
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, Finnish, Swedish, Spanish, French

Symantec Client Security for Nokia Communicator

Symantec

Symantec™ Client Security for Nokia Communicator provides protection through integrated antivirus and firewall technologies for the Nokia 9500 Communicator and Nokia 9300 smartphone, protecting them from unwanted network intrusions, viruses, and worms. The solution mitigates threats and protects existing enterprise infrastructure by allowing IT to extend existing enterprise security policies.

Business need: Provides virus and network intrusion protection for the Nokia 9500 Communicator and Nokia 9300 smartphone
Works on Series 80 Platform
Enabling technology: Symbian OS
Language localization: All European languages, Russian, Turkish, Brazilian Portuguese; other languages available upon request
Server infrastructure: Mobile device management system

Contact: matt_ekram@symantec.com

WebSphere Everyplace Connection Manager

IBM

WebSphere® Everyplace™ Connection Manager provides secure, uninterrupted access to needed data. Offering a distributed, scalable, multipurpose communications platform, it helps enterprises optimize bandwidth, reduce costs, and ensure security by efficiently extending existing applications to workers in the field over many different wireless and wireline networks. Seamless cross-network roaming allows dynamic switching of network connections without interrupting applications. Data encryption ensures security.

Business need: Extends enterprise intranet to any network that supports the Nokia 9500 Communicator
Works on Series 80 Developer Platform
Enabling technology: Selected Symbian OS devices including the Nokia 9500 Communicator

Genimap EuroMapper

Genimap

Genimap® EuroMapper provides mobile European or U.S. maps, including address and point-of-interest searches, and door-to-door routing. The application downloads content from the server via a GPRS connection. Genimap EuroMapper is modifiable; all the information is retrieved from the server and can therefore be connected to customer databases.

Business need: Provides mobile mapping services to users, can be added to existing services as a mapping and routing tool
Works on Series 60 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, French, Italian, Spanish

Contact: Janne.maijala@genimap.fi

Genimap Navigator for Nokia Communicator

Genimap

Genimap® Navigator for Nokia Communicator provides GPS support, Europe-wide maps, nautical charts, topographical maps, an address search, point-of-interest (POI) search, and door-to-door routing. It uses server-side processing to generate downloaded information. Genimap Navigator for Nokia Communicator can be downloaded or delivered via CD or MMC. The application is used in more than 30 countries.

Business need: Allows users to access maps and gain access to location-aware information from their company's server
Works on Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, German, French, Italian, Spanish, Swedish, Finnish

Contact: Janne.maijala@genimap.fi

Goin' Dutch

mBrain Software

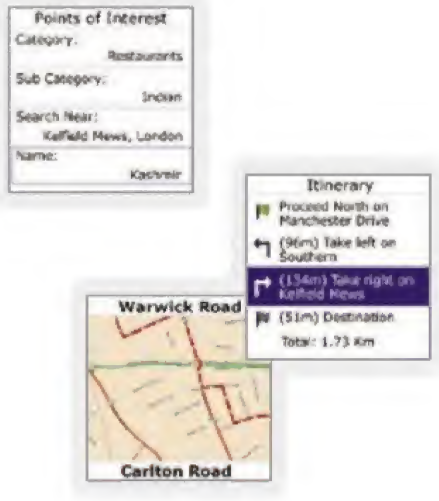

Goin' Dutch allows users to easily and quickly calculate how much each person in a party must pay when they share a bill.

Business need: Enables users to quickly calculate shared costs
Works on Series 60 Developer Platform
Enabling technology: Symbian OS

Contact: svdwal@mBrainSoftware.com

GoMap

Telmap

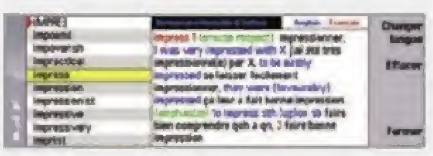

The GoMap™ Mapping and Routing Guide provides mobile access to worldwide mapping, routing, and travel content. GoMap provides address and point-of-interest searches, full color maps, advanced routing capabilities, and updated content worldwide. An easy-to-use application for Java phones, GoMap simplifies urban navigation.

Business need: Provides mobile mapping, routing, and travel information for business or leisure needs
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Java MIDP 2.0
Language localization: English; other languages available upon request

MightyPhone

FusionOne, Inc.
Business E-mail & PIM

MightyPhone™ is a wireless service that keeps mobile phones automatically updated with address book and calendar information from subscribers' PCs. MightyPhone includes innovations such as on-phone sign-up and AutoSync™, using "wake-up" SMS to keep phones automatically up-to-date.

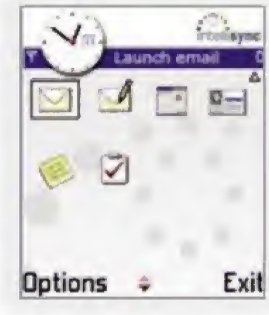

Business need: Provides mobile phone users with offline access to their corporate address books, calendars, and to-do lists
Works on Series 40 Developer Platform, Series 60 Developer Platform, Series 80 Developer Platform
Enabling technologies: OMA Data Synchronization (SyncML), Symbian OS
Language localization: English; other languages available upon request

FusionOne

FusionOne

www.fusionone.com
Contact: bizdev@fusionone.com

FusionOne Inc. is a developer of mobile services that help people access, manage, and protect their data, including contacts and calendar information. These turnkey service offerings are made available to wireless subscribers through partnerships with operators, mobile phone manufacturers, and select retailers.

Intellisync E-mail Accelerator

Intellisync
Business E-mail & PIM

Intellisync E-mail Accelerator is a wireless Push e-mail and PIM solution. It connects a variety of mobile devices to groupware and e-mail servers, and it works with different classes of mobile devices to allow business professionals easy access to e-mail, calendar, contacts, notes, and tasks.

Business need: Provides mobile and wireless access to e-mail and PIM on Nokia devices
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, French, Italian, German, Spanish

Intellisync File Sync

Intellisync
Business Collaboration

Intellisync File Sync provides mobile access to files, intranets, and Web sites. Owners of files and Web content simply store materials such as sales presentations, legal documents, forecasting spreadsheets, and the corporate intranet on the company network. File Sync detects updates and pushes only the changes to the mobile terminals.

Business need: Provides mobile access to up-to-date business documents and Web sites
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, French, Italian, German, Spanish

Intellisync Systems Management

Intellisync
Device Lifecycle Management

Intellisync Systems Management offers a mechanism for remotely maintaining and securing mobile devices. The solution pushes new software applications and software updates, collects hardware and software inventory, and offers theft-and-loss protection, securing lost or stolen devices.

Business need: Centralizes control and administration of mobile devices
Works on Series 60 Developer Platform, Series 80 Developer Platform
Enabling technology: Symbian OS
Language localization: English, French, Italian, German, Spanish

Intellisync

www.intellisync.com
Contact: cgrevas@intellisync.com

Intellisync Corporation is a leading developer and marketer of wireless software solutions for the global mobile-communications market. Intellisync offers companies an e-mail alternative to BlackBerry, as well as a way to mobilize and synchronize enabled devices without expensive hardware outlays.

ROUTE 66 Mobile Country 2005

Route 66
Location & Navigation

ROUTE 66 Mobile Country 2005 allows Symbian OS smartphones to be used as navigation systems. Turn-by-turn voice instructions and on-screen directions guide users to their destinations. If a user misses a specified turn, Mobile Country 2005 recalculates the route and updates the directions. Users can also automatically download up-to-date traffic information from the ROUTE 66 Web site via GPRS connection. This product is available for: the United Kingdom, France, Germany, Scandinavia, Benelux, Spain/Portugal, Austria/Switzerland, Italy, the United States, and Canada.

Business need: Provides personal mobile navigation
Works on Series 60 Developer Platform
Enabling technologies: Symbian OS v6.1 and higher
Language localization: English, French, German, Norwegian, Swedish, Finnish, Danish, Dutch, Portuguese, Spanish, Italian, Romanian, Czech, Greek

ROUTE 66 Mobile Europe 2005

Route 66
Location & Navigation

With ROUTE 66 Mobile Europe 2005, Symbian OS smartphones can be used as navigation systems. Users are guided to their destinations by turn-by-turn voice instructions and on-screen directions. Should the user miss a specified turn, Mobile Europe 2005 will recalculate the route and update the directions. Users can also automatically download up-to-date traffic information from the ROUTE 66 Web site via GPRS connection. This product includes the following maps: Scandinavia, Britain, Benelux, Germany, France, Alp countries, Iberian Peninsula, Italy, Athens, and major roads throughout Europe.

Business need: Provides personal mobile navigation
Works on Series 60 Developer Platform
Enabling technologies: Symbian OS v6.1 and higher
Language localization: English, French, German, Norwegian, Swedish, Finnish, Danish, Dutch, Portuguese, Spanish, Italian, Romanian, Czech, Greek
