Business Collaboration

Avaya one-X Mobile Edition

Avaya

Avaya one-X Mobile Edition is client software that puts the power of one's office desk phone into an S60 device. Basic call-handling features, such as multiparty conferencing, transfer, and abbreviated 4/5 digit extension dialing, are accessed via a simple menu. Outgoing calls can use the corporate telephony network, often resulting in much lower communications costs, especially for international calls. Also, the tracking and reporting mechanisms of corporate IP-PBX can be applied to mobile calls. This application makes it is easy to move between business and personal use of the mobile device just by turning the one-X Mobile Edition application on (for business mode) and off (for personal mode). This enables end users to manage their work/life balance.

Birdstep Intelligent Mobile IP Client

Birdstep Technology

Birdstep Intelligent Mobile IP Client delivers a seamless mobility client based on Mobile IP that inter-operates with existing infrastructure equipment, authentication mechanisms, and VPN solutions. It allows secure, continuous connectivity between Wi-Fi, WiMAX, and GSM/GPRS/UMTS/CDMA networks. Mobility occurs seamlessly across different types of infrastructures without application downtime, security degradation, or user intervention. The solution always chooses the best available network for the activated application based on predefined policy. The user does not need to worry about missing the connection while doing work. Any available application or solution can benefit from this patented seamless mobility solution and the enterprise or operator's infrastructure does not need to be modified to work with this solution.

Platform Compatibility: Series 40, S60, Series 80

Business Communication Server

Telepo

Business Communication Server™ effectively allows enterprises to integrate and eventually replace traditional land lines with mobile phones and IP-based voice solutions. The server is responsible for dynamic call routing and authorization of calls placed on any device. It provides a SIP registrar to support the registration of other IP phones and VoIP clients in dual-mode mobile/WLAN phones. Its unique, tariff-driven, least-cost routing service allows multinational enterprises to optimize their WANs for voice traffic to ensure low-cost operations. The server also hosts intelligent routing services to handle communications for end users, as well as providing enterprise control of all voice communication through its online reporting, statistics, and analysis tool for all mobile, fixed line, and VoIP traffic.

Business Organizer

HansaWorld

Business Organizer is a full online client for HansaWorld Enterprise on Nokia devices. HansaWorld Enterprise is one of the broadest ERP and CRM suites on the market, with more than 45 fully featured modules and a wide variety of functions that make it suitable for almost any business type. The cross-platform software enables LAN and WAN configurations with mixed servers and clients operating on the same network for a wide variety of specific industries, including hotels, restaurants, high-street retail, property management, contract renewals and maintenance, other service industries, and term rentals.

Compact Shared Document

Dream to Reality

Compact Shared Document (CSD) is the new standard for e-document distribution. The small size of documents converted to the CSD format make distribution over PCs or mobile networks easy. The simple and compact CSD viewer (120 KB) is small enough to be installed on practically any mobile device. Users can search by text, highlight, rotate, and zoom. CSD gives users seamless document sharing between their desktops and mobile devices.

Content Beamer 3.0

ThinPrint

The new version of Content Beamer enables mobile devices to carry out important office activities. Users with a mobile phone or PDA can view their e-mail attachments including embedded photos and images, without having to download them from the server and without having to open a particular application on the mobile device. The patent-pending “remote document” technology also ensures compatibility with any e-mail Push solution, minimal data volume, and receipt of the original file. The file can then be printed via Bluetooth or infrared connection to the network printers, faxed, displayed on a notebook screen, or downloaded to the device for editing. A “short fax” function makes it possible to send signed faxes via GPRS or UMTS.

Content Beamer Online Services

ThinPrint

Content Beamer Online Services are hosted services that help users meet their daily business needs. The majority of all decisions today are based on documents; decision makers are spending 42% of their time with documents. Content Beamer Online Services add a complete set of document-handling features to any mobile device. Starting with high-quality printing of local office type documents (.doc, .pdf, .ppt, .txt, .xls) for S60 mobile devices based on Symbian OS, Content Beamer Online Services will soon cover the whole range of document-handling features, such as viewing, printing, faxing, and more for any mobile device. For document creation and editing purposes, Content Beamer Online Services are easy to integrate with any existing mobile application.

DDM Field Force Solution for Enterprises

BookIT

Dynamic Dialog Matrix (DDM™) Field Force Solution for Enterprises provides real-time alerts and authenticated mobile transactions on any device, anywhere. Enterprises gain robust interaction without terminal software or user training. Multiple notifications, requests, and tasks can be distributed to all users simultaneously. These transactions are then answered in any order using just one button. Users can replace scattered paperwork with a Web console plus DDM SMS for centrally managed and reported real-time mobile workflow. Enterprises can reconfigure dynamic business processes rapidly so they flow freely across organizational boundaries and international borders.

Platform Compatibility: Series 40, S60, Series 80

Language: C++, J2ME

Language localization: English

Contact: jukka.salonen@bookit.net

DDM Mobile Multipass

BookIT

The Dynamic Dialog Matrix (DDM™) Mobile Multipass service enables authenticated end-to-end transactions in open mobile and Internet service networks. The service provides automatic user authentication and allows each user to have multiple active mobile dialogs. The DDM service usability is extremely good because of its simplicity. The user does not need to know short codes for different services, keywords, usernames, passwords, or PIN codes. Users simply reply to transaction messages by the "one-button-principle." The solution is based on using standard SMS messages, and it works with all mobile devices. The DDM Mobile Multipass service is useful for mobilizing any business process, and it offers a rapid deployment platform for various bidirectional mobile transactions.

Platform Compatibility: Series 40, S60, Series 80

Language: C++, J2ME

Language localization: English

Contact: jukka.salonen@bookit.net

DDM Rapid Deployment Platform

BookIT

Dynamic Dialog Matrix (DDM™) Rapid Deployment Platform provides the enterprise modern tools for rapid development of wireless business applications. Using this platform the IT department and/or system integrators can create reliable two-way authenticated transaction-based dialogs and control several simultaneous sessions per each user. The simplicity of the user interface allows rapid deployment of applications throughout the whole employee base within the mobile enterprise. BookIT DDM Rapid Deployment Platform consists of the BookIT DDM Enterprise Server and development tools.

ISMO

Sybase/iAnywhere

ISMO is a fleet-management solution that can double the margin of a transportation company by tracking vehicle movements, actions, and the working time of the driver. It provides the company with an electronic driver's log with duration and location information for each vehicle action. This information can be used as a basis for salary calculations and customer reports. ISMO has delivered excellent productivity increases since its first deliveries in 2001 and has been developed continuously since then. Along with ISMO, a full mobile-device management solution can be deployed, or ISMO can be deployed for fast-paced field-service organizations with similar effects.

MBX

OnRelay

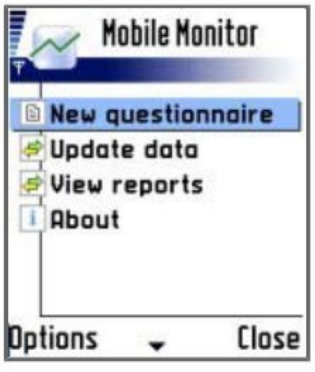

MBX (Mobile Branch Exchange) is a client/server software system that transforms a software-based mobile device into a fully functional private branch exchange (PBX) extension. MBX can autonomously route all incoming and outgoing mobile device calls through the office phone system, making employees' mobile devices duplicates of their PBX extensions. MBX allows mobile users access to functions such as fiÂxed-to-mobile handover, corporate directory, corporate voicemail indication, full missed-call registry, caller ID for calls routed through the PBX, and customizable configuration. MBX is a scalable software-only solution that works over any mobile network and tightly integrates with existing TDM and IP-based PBXs.

Platform Compatibility: S60

Language: C++

mForce

One Globe Limited

mForce wirelessly connects the manufacturer, its sales force, and retail outlets, enabling the flow of real-time data among them. The software platform runs on a mobile data network. The client software sits on the mobile device, and the server software resides in the company-specific IDC or China Mobile service center. Members of the sales force then input data into their mobile devices and send it to the server via the mobile network. They then receive the latest company instructions and data, and are kept well informed and managed. With mForce, data transmission between the mobile device and the central server is instant, reliable, secure, and cost-efficient.

Active Desk

Cibenix

Active Desk enables users to personalize and customize their S60 devices, lowering the barriers to adopting sophisticated new technology and raising the value of the device to the end user. The application allows full customization of the application interface with a simple, one-step operation. Active Desk focuses on improving the usability of the device, bringing all key information to the phone's "desktop" with powerful navigation within the Active Desk environment and easy access to the built-in applications and third-party software and services.

Platform Compatibility: S60

Active Mail

Cibenix

Active Mail is an ideal companion to the built-in e-mail capabilities of S60 devices, as it greatly extends their messaging capabilities. This e-mail download manager improves the ease of using the device as an e-mail client, increasing convenience and reducing costs by automatically downloading e-mails based on user-configurable rules. With Active Mail and an S60 device, users are always virtually connected to their mailboxes.

BlackBerry Connect

Research In Motion

BlackBerry Connect™ brings the advantages of proven BlackBerry® Push technology to the Nokia 9300 Communicator, Nokia 9300i smartphone, Nokia 9500 Communicator, and the Nokia E60, Nokia E61, and Nokia E70 devices. With BlackBerry Connect, users can choose and enjoy the feature-rich capabilities of their preferred Nokia devices together with BlackBerry Push e-mail. Supported BlackBerry features include Push-based wireless e-mail access, wireless e-mail reconciliation, and attachment viewing through BlackBerry Enterprise Server™ and BlackBerry Internet Service™. Additional features supported through the BlackBerry Enterprise Server include wireless calendar synchronization, remote address lookup, triple DES encryption, and IT policy enforcement and commands.

Communigazer

Fifth Element

Communigazer® enables easy-to-use, fast, and secure online access to corporate Microsoft® Exchange servers for mobile device users — without using Push technology, third-party service providers, or gateways. Optimized for use with Exchange servers, Communigazer provides access to all major Exchange functions, including calendar, tasks, and contacts synchronization, without requiring modifications to current Exchange or Active Directory® environments. The application allows the server to perform all functions related to attachments and synchronization, minimizing traffic between device and server.

Consilient Server and Clients

Consilient

Consilient Server and Clients provides an easy-to-use, cost-efficient method for users to access personal and corporate data by allowing them to receive secure real-time access to e-mail and PIM information on their Nokia devices. Consilient client/server software uses the open P-IMAP standard for wireless messaging access and OMA Data Synchronization for calendar and PIM capabilities. Network operators have the opportunity to broaden their wireless-data product offerings by supporting the most popular devices and e-mail platforms on the market. Consilient also provides enterprises with wireless push e-mail solutions on multiple devices and multiple e-mail server platforms. Designed to meet the demanding requirements of corporate IT, Consilient Server and Clients is a reliable, scalable, and affordable behind-the-firewall solution.

Digital Pen Platform

XMS

XMS Penvision's main product is an Internet/intranet-based framework (XMS DPP) for processing forms, drawings, and notes based on digital pen and paper. The platform is ideal for companies interested in taking a shortcut into the digital pen and paper business. This product is a generic tool that can be customized for different purposes, and paper products of all kinds are used in the DPP. This application can be used for sales-force automation, field service, interview forms, time reporting, inspection forms, purchase order forms, notebooks, and more. XMS DPP can be hosted by XMS Penvision, by the partner, or by the end customer and supports western and Asian languages for handwriting recognition.

FonePIM

NewBay Software

FonePIM enables mobile device users to quickly and easily back up and recover personal mobile device data. It provides users with an online space to store and retrieve device information such as contacts, tasks, calendar, and notes. With FonePIM, users can synchronize instantly (over any mobile data channel) with their mobile devices and manage their data using a browser, allowing the data to be recovered easily if the user changes or loses the device. Based on OMA Data Sychronization (SyncML), FonePIM is uniquely designed to support millions of users and large volumes of simultaneous over-the-air syncs with 99.999% carrier-grade performance and scalability. This carrier-grade solution improves customer satisfaction and retention by providing a value-add application that locks users into the network.

Mobile Buddy

net mobile

Mobile Buddy, a highly compact and flexible J2ME application for mobile devices, simplifies access to selected content. The modular architecture of Mobile Buddy allows users to combine entertainment, infotainment, and advertising components, including news, premium content, or additional services such as advertisements or interactive messaging. Operators can use Mobile Buddy combined with their main mobile portals as microsites. This application can drive revenues by helping to brand the user interface, dynamically promoting services and special content on the screen, and providing seamless connections — making it easier for consumers to find information on the first try.

SEVEN Always-On Mail Enterprise Edition

SEVEN

SEVEN Always-On Mail Enterprise Edition extends Microsoft® Outlook® and Lotus Notes access to the mobile device of choice. It is based on advanced Push technology that enables real-time communications without the need for any user interaction. This means the mobile workforce can benefit from complete e-mail functionalities, such as attachments, calendar, contacts, and full integration to its corporate e-mail infrastructure over 2.5G, 3G, and wireless LAN. All communication is secured with AES 128-bit encryption. Enterprise deployment takes less than two hours, as there's no need to change corporate systems, networks, or firewalls. Ongoing management features are robust and intuitive. All this adds up to low total cost of ownership with a quick return on investment.

MCommerce

SPMC

MCommerce enables e-commerce operating companies to arrange mini-portals for the online purchase of their products by mobile device. MCommerce makes it easy for companies to get into the e-commerce business, because they can create Web-like mini-portals without needing to know mobile programming languages. MComerce also provides a very user-friendly, specific-purpose graphic toolkit to help the provider to deploy the contents and the visualization style. The server-side application sends the correct information to the J2ME or Symbian application on the device, allowing users to purchase items or bookmark them if they are not available at the moment. The whole application interacts with the exclusive SPMC MobilePay billing platform used to manage credit or rechargeable card transactions, which completes the full e-commerce support for a mobile scenario.

S60 3rd Edition

MobiComp

MobileKeeper™ lets subscribers archive and recover critical content stored on their mobile devices, including address books, calendars, text messages, ring tones, wallpapers, games, images, videos, and more. This unique solution secures mobile-based content in a convenient and accessible way. MobileKeeper also works as an extended storage plan, allowing users to move content from their device and recover it later. Based on real users' needs, MobileKeeper is an effective tool for disaster recovery and peace of mind.

Sales Automation

Reslink Mobile Sales

Reslink Solutions

The Reslink Mobile Sales (RMS) Symbian device application and framework communicates and interacts with the Reslink Mobile Enterprise Server (RMES) ASP platform. Created for secure and high-usage of mobile data collection and the transaction and monitoring of mobile field-force workers, RMES collects data by using an S60 or Series 80 device and a wireless Bluetooth bar-code reader. Bar-code readers enable field-force workers to collect 100% accurate data from the field 200 times faster than by manual feed.

SyncShield

Capricode

SyncShield is an advanced device-management tool that enables the remote management of mobile device settings, applications, and content over the air. The core of SyncShield is the server, which takes care of management sessions with client devices using the Open Mobile Alliance written standard, OMA DM. The OMA DM standard and Java technology also makes the system installable and usable in multiplatform environments. A key feature of SyncShield is the ability to install and update applications for wireless devices over the air in a way that takes the existing device configuration into account. The same server is also operable in wired workstation environments, where SyncShield offers an efficient way to decrease the legwork of administrators upon new configurations and updates.

Platform Compatibility: S60, Series 80

TRY

Mobile Innovation

TRY is a dynamic user interface test tool developed exclusively for Symbian OS. It can be used in all stages of testing, from smoke and system testing to regression and localization testing. TRY automates tedious tasks that are often prone to input errors, shortening development cycles and reducing project risk. Users can write or record scripts that, when executed, can automate most interaction with a device or emulator. TRY scripts can be run many times as part of a regression test plan, saving the time, money, and effort associated with manual testing.
